**PRELIMINARY ESTIMATE OF GROSS DOMESTIC PRODUCT
IN MAZOWIECKIE VOIVODSHIP IN 2013**

When publishing Statistical Office data please indicate the source.

Presented data are preliminary and will be subject to revision due to revision policy applied in national and regional accounts. Final data for 2013 will be published in October 2015.

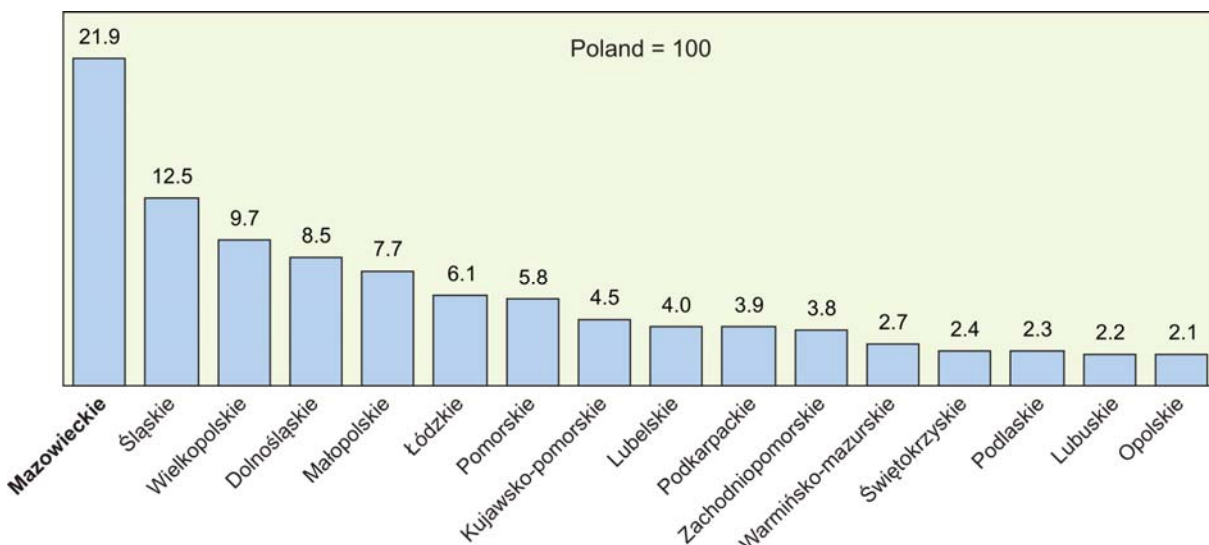

Data were compiled according to the principles of the "European System of Account (ESA 2010)", introduced by Regulation No. 549/2013 of the European Parliament and of the Council (EU) of 21 V 2013 on the European system of national and regional accounts in the European Union (Official Journal of the EU L 174, 26.06. 2013).

Adopted methods of regionalisation in principle do not differ from the ones used in elaboration of final data on gross domestic product and its elements in the regional perspective. Differences result from using in the preliminary estimate certain methodological simplifications, stemming from the limited availability of sources of data for some groups of entities of the national economy. A list of data sources used in the calculations can be found in the brief information "Wstępne szacunki produktu krajowego brutto według województw w 2012 r. (opracowanie eksperymentalne)", published on the website: <http://stat.gov.pl/obszary-tematyczne/rachunki-narodowe/rachunki-regionalne/wstepne-szacunki-produktu-krajowego-brutto-wedlug-wojewodztw-w-2012-r-opracowanie-eksperymentalne,4,1.html>

Mazowieckie voivodship is the region which generates the largest share of the gross domestic product (GDP), illustrating the final result of the activity of all entities of national economy. According to preliminary data, in 2013 the share of Mazowieckie voivodship in generating GDP was 21.9% and it was over 10 times larger than the share of the voivodship with the smallest share (Opolskie). In comparison with 2012 this share did not change. At the same time it is worth stressing that an increase of share has been registered in only three voivodships (Wielkopolskie – by 0.2 percentage points as well as Kujawsko-pomorskie and Podlaskie – in both by 0.1 percentage points).

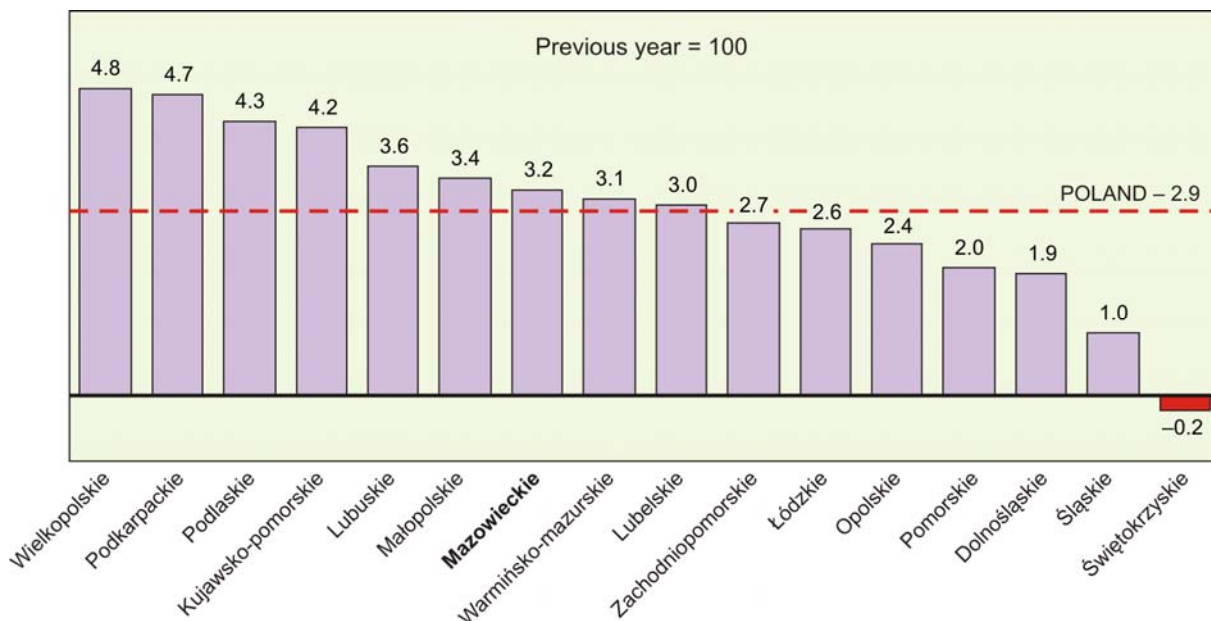

Share of voivodships in generating gross domestic product in 2013 (current prices)

The value of GDP generated in Mazowieckie voivodship in 2013 amounted to 364513 million zlotys and in comparison to the previous year it was (in current prices) higher by 3.2%. The increase was higher

than the average growth rate in the country by 0.3 percentage points; the highest increase occurred in Wielkopolskie voivodship – by 4.8%.

Increase of the gross domestic product by voivodships in 2013 (current prices)

In 2013 the gross domestic product per 1 inhabitant (GDP *per capita*) in Mazowieckie voivodship amounted to 68682 zlotys and it was 2.9% higher than a year earlier. For many years, Mazowieckie voivodship has been achieving the highest level of this indicator in Poland – in 2013 it was 59.1% (25514 zlotys) above the national average; in 2012 it was higher by 59.2%. Apart from Mazowieckie, only three other voivodships surpassed the national average, but to a much smaller degree. GDP *per capita* registered in our voivodship was over 2 times higher than in the voivodship with the lowest value of this indicator (Lubelskie – 30477 zlotys).
