GROSS DOMESTIC PRODUCT IN MAZOWIECKIE VOIVODSHIP IN THE YEARS 2010–2013

When publishing Statistical Office data please indicate the source.

Presented data were compiled according to the principles of the "European System of Accounts (ESA 2010)", introduced by the Regulation No. 549/2013 of the European Parliament and of the Council (EU) of 21 V 2013 on the European system of national and regional accounts in the European Union (Official Journal of the EU L 174, 26.06.2013).

Data for the years 2010–2012 were changed compared to those published previously due to continuation of work on ESA 2010 methodological standards' implementation, applying the European Commission's recommendations as well as updating source data. Methodological changes are connected mainly with subjective range of the general government sector.

Data for the voivodship and subregions correspond to 2 and 3 levels of the Nomenclature of Territorial Units for Statistical Purposes (NTS), compiled on the basis of the Nomenclature of Territorial Units for Statistics (NUTS) obligatory in the countries of the European Union. NTS obligatory since 1 I 2015 was implemented by the decree of the Council of Ministers, dated 3 XII 2014 (Journal of Laws 2014 item 1992) replacing the previous one obligatory until 31 XII 2014. Changes in the subregions' borders and names are presented on the maps below:

Data by kind of activity were compiled according to the Polish Classification of Activities – PKD 2007 introduced on 1 I 2008 by the decree of the Council of Ministers, dated 24 XII 2007 (Journal of Laws No. 251, item 1885 with later amendments). According to adopted classification abbreviations of some names of sections were applied – indicated by symbol " Δ ".

Gross domestic product per capita was calculated on the basis of the number of population (as of 30 VI) based on the results of the Population and Housing Census 2011.

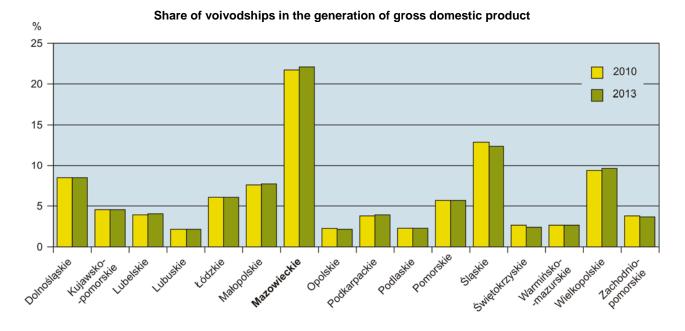

Valuable data and dynamics presented in the tables and in the analytical part – unless otherwise indicated – were compiled in current prices. Current prices from the year preceding the reference year were adopted as constant prices in the calculations of gross domestic product volume indices.

Relative numbers (indices, percentages) were calculated on the basis of absolute data expressed with higher precision than that presented in the text and tables. Due to rounding of data, there is a possibility of some discrepancies in the addition of data for total items in the tables. The numbers are content-wise correct.

Methodological explanations of basic terms and methods of data compilation one can find in the publication "Gross Domestic Product – Regional Accounts in 2013", Katowice 2015.

GROSS DOMESTIC PRODUCT

Mazowieckie voivodship is, economically, the strongest region of the country that produces the largest part of gross domestic product (GDP) illustrating a final result of activity of all entities of national economy. In 2013 the share of Mazowieckie voivodship in generating GDP amounted to 22.1% and was higher by 0.4 pp than in 2010 and by 0.2 pp than in 2012.

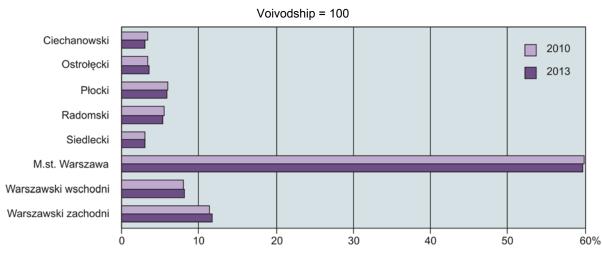

Value of GDP produced in the voivodship in 2013 was as high as 366431 mln zl and in comparison with the previous year it was – at current prices – higher by 2.7%, and at constant prices – by 2.8%. In comparison with the 2010 level, gross domestic product was in real terms higher by 9.7% (by 8.1% in the country); higher growth was recorded only in Wielkopolskie voivodship – by 10.0%. In the years 2010–2013 an average annual growth rate of gross domestic product stood at 3.1% (at constant prices), at the national average of 2.6%. In comparison with other voivodships it was one of the fastest increases in terms of year-on-year growth of GDP volume (Mazowieckie was ranked second preceded by Wielkopolskie voivodship with an average annual growth rate estimated at 3.3%).

Calculations' results of gross domestic product in territorial cross-section for the years 2010–2013 show a clear disparity in the level of economic growth in subregions of Mazowieckie voivodship. In 2013 the shares of individual subregions in generating GDP of the voivodship ranged from 3.0% in siedlecki subregion to 59.6% in m.st. Warszawa subregion; in 2010, it ranged from 3.0% to 59.8% respectively. Thus the gap between the subregions with the biggest and the smallest share in generating GDP decreased by 0.2 pp in the period under discussion (from 56.8 to 56.6 pp). However, the relation between these subregions remained unchanged – in 2010 as well as 3 years later the value of GDP produced in m.st. Warszawa was 20 times higher than in siedlecki subregion.

In comparison to 2010 three subregions increased their share in producing gross domestic product, of these warszawski zachodni increased the most (by 0.4 pp), four subregions reduced their share, including m.st. Warszawa – by 0.2 pp, however the share of siedlecki subregion did not changed.

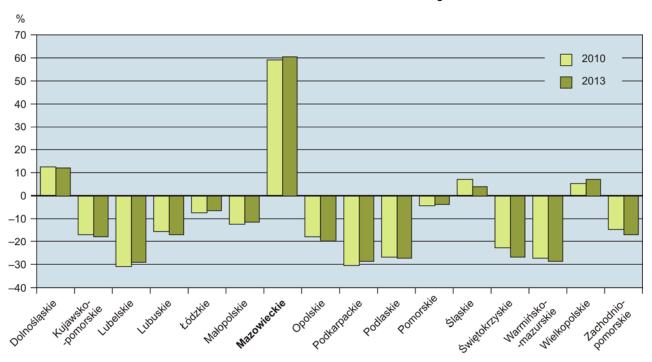

2

GROSS DOMESTIC PRODUCT PER CAPITA

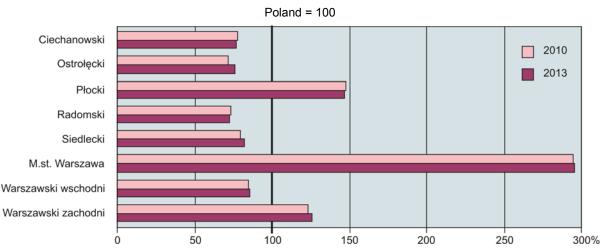

Territorial differences in the level of economic development best illustrate gross domestic product per capita. In 2013 the average level of this rate for Mazowieckie voivodship was 69043 zl and was higher by 2.4% in comparison with the previous year. In real terms it was higher by 2.5% compared to 2012, and compared to 2010 – by 8.5% (in the country by 1.3% and 8.0% respectively). Mazowieckie voivodship reached the highest level of this rate in Poland – in 2013 it was higher by 60.5% (by 26023 zl) than the national average; in 2012 it was higher by 59.4%, and in 2010 – by 59.1%.

Gross domestic product per capita by voivodships

Relative deviations from the national average

Value of GDP per capita varies greatly among individual subregions of the voivodship – in 2013 this rate amounted from 31331 zl in radomski subregion to 127074 zl in m.st. Warszawa. M.st. Warszawa holds first position in terms of GDP per capita, exceeding the national average by 195.4%. In the remaining subregions of the voivodship GDP per capita amounted from 72.8% of the national average (in radomski) to 146.7% (in płocki). The lowest value of GDP per capita recorded in 2013 in radomski subregion constituted 24.7% of this rate generated in m.st. Warszawa subregion. In 2010 the ratio between the subregion with the lowest rate (ostrołęcki) and subregion with the highest rate (m.st. Warszawa) stood at 24.3%. Reduction of the gap between the subregions in terms of GDP per capita is also reflected by the decrease of the indicator of dispersion¹ by 0.7 pp; in 2010 it amounted to 55.1%, and in 2013 – 54.4%.

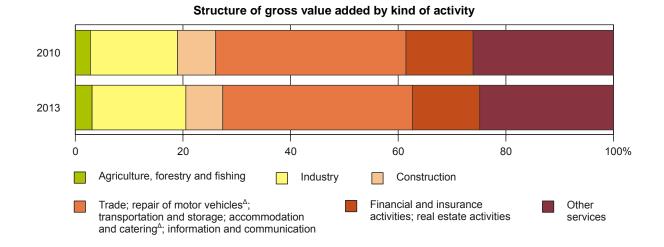

Gross domestic product per capita by subregions

GROSS VALUE ADDED

Gross value added (GVA) measures the newly generated value as a result of the production activity of national institutional units. In the years 2010–2013 in Mazowieckie voivodship, similarly as in the country, the highest gross value added generated entities conducting activity in trade; repair of motor vehicles; transportation and storage; accommodation and catering; information and communication, and the lowest share – entities conducting activity in agriculture, forestry and fishing.

¹ Indicator of dispersion (diversity measure) of regional GDP per capita was calculated at subregion's level as a sum of the absolute differences between subregions and voivodship GDP per capita, weighted with the share of population of particular subregions in voivodship and expressed in percent of the voivodship's GDP per inhabitant.

In 2013 entities conducting activity in trade; repair of motor vehicles; transportation and storage; accommodation and catering; information and communication generated 35.2% of the voivodship gross value added, i.e. by 0.2 pp less than in 2012, but by 0.1 pp more than in 2010. The share of entities engaged in other services (including public administration and defence; compulsory social security) constituted 24.9% of the voivodship GVA, and in comparison with 2012 it increased by 0.2 pp, but in comparison with 2010 decreased by 1.0 pp. Entities engaged in industry generated 17.4% of the voivodship's gross value added, i.e. by 0.4 pp less compared with 2012, but by 1.1 pp more compared with 2010. Entities engaged in financial and insurance activities; real estate activities in 2013 generated 12.6% of the voivodship gross value added, i.e. by 0.6 pp more than in 2012 and by 0.1 pp than in 2010. Entities engaged in construction generated 6.9% of the voivodship GVA, i.e. by 0.5 pp less than in 2012 and 2010. The share of agriculture, forestry and fishing in the generation of the voivodship gross value added in 2013 amounted to 3.1%; compared with both 2012 and 2010 it increased by 0.4 pp.

The above presented changes in the structure of economy varied in particular subregions of the voivodship. Compared to 2010 the biggest changes were recorded in industry (ranging between minus 2.4 pp in ciechanowski and plus 3.0 p. p. in płocki). Slightly smaller changes took place in construction (from minus 2.6 pp in warszawski zachodni to plus 0.8 pp in radomski). Changes recorded in the remaining kinds of activities ranged between minus 2.3 and plus 2.6 pp. It is noteworthy that in all subregions the share of entities engaged in other services decreased. Whereas in all subregions (excluding m.st. Warszawa) the share of entities engaged in agriculture, forestry and fishing increased.

Structure of gross value added in subregions by kind of activity
